National Youngstock Conference Harper Adams University, Shropshire Wednesday July 27, 2022

Packed programme focuses on youngstock

However calf-rearing success is measured – increased growth rates, reduced cases of pneumonia or scours, or achieving target age at first calving – there are multiple factors at play, and these all need to be addressed in order to hit these goals. The National Youngstock Conference, which will be held on July 27 at Harper Adams University, is bringing together an exciting programme of speakers who will address the key topics relating to youngstock management to provide rearers with practical solutions to address common issues on farm, and enable producers to maximise calf performance. Whether rearing dairy-heifer replacements or beef calves, the programme has something relevant to everyone. From the latest breeding technology and tips on how to optimise colostrum feeding, through to feeding, weaning and optimising health, the conference covers all aspects of youngstock management.
